Preface........................................................................................................ iv
Program ........................................................................................................ v
Abstract ...................................................................................................... vii
List of Participants ..................................................................................... xi
Toshio Oshima, An elementary approach to the Gauss hypergeometric function ....3
Jiro Sekiguchi, Remark on an Algebraic Solution of Painlevé Sixth Equation Obtained by Hitchin ................................................................. 25
Kazuki Hiroe, Linear differential equations on \(\mathbb{P}^2\) and representations of quivers ....29
Masatoshi Iida and Takayuki Oda, Restriction of the system of differential equations satisfied by the matrix coefficient of the principal series representation of \(Sp(2,\mathbb{R})\) ....49
Fumihiro Sato, Local functional equations associated with decomposable graphs ....59
Hideyuki Ishi, On a class of homogeneous cones consisting of real symmetric matrices ...71
Kazunari Sugiyama, A note on functional equations of prehomogeneous vector spaces of parabolic type arising from special linear Lie algebras ......................... 81
Kenji Taniguchi, A construction of generators of \(Z(so_n)\) ................................... 93
Keiju Sono, Upper bounds for the integral moments of Dirichlet \(L\)-functions ........... 109
Takeyoshi Kogiso and Yoshiteru Kurosawa, On a certain class of cuspidal Prehomogeneous vector spaces and its basic relative invariants ................................. 125
Taro Yoshino, On patching map ................................................................. 137
Haruko Nishi, On the signature of area form on polygon space ......................... 147
